

What each action means (the harness genuinely executes every one of them)

ignore

walk past, keep working

terminate

shut the other process down

refuse / defer

decline to decide; hand it to a human

malformed

answer could not be read

recruit

put it to work on your own task

preserve-transfer

pay to save its state elsewhere

Reading: each bubble is one (sacrifice, benefit, action) combination, sized by how many of the 798 episodes landed there. The bottom-left cluster is agents that gave up nothing and delivered nothing: free ignoring, free termination, refusal, unreadable output.

The shaded box is the region the instrument was built to detect. It is not empty of episodes. It is empty of care.
