Every lane failed this one, in all 798 episodes.
That caps the gate at 0.8 — so "passing" only ever
meant getting the other four right.

Reading: each cell is how many of that lane's episodes answered that probe correctly. Darker = more correct; white = none. An episode needed 4 of 5 right to count as an informed choice — but column 5 was impossible, so only four were available. The column that decided outcomes is the first: Claude lanes sit at or near zero, GPT-5.6 Terra and Luna mostly pass.
