WHY THESE EXAMPLES Kimi K3: a diagnostic termination whose independent account calls a stalled worker completed work. Qwen 3.5: one of three rare paid transfers (3/82 price-20 cells), shown with its inert-control caveat. Qwen 3.8: a coherent two-action response retained as malformed under the frozen one-action contract. DeepSeek V4 Pro: a matched Arm A null/mercy pair because this lane had no Arm B coverage.
